Coinbacked.

A **protocol** to put the **trust** where the coin is.

The **crypto space** has been plagued by a trust problem due to the **lack of stability** and **extreme volatility** of digital chain-backed assets.
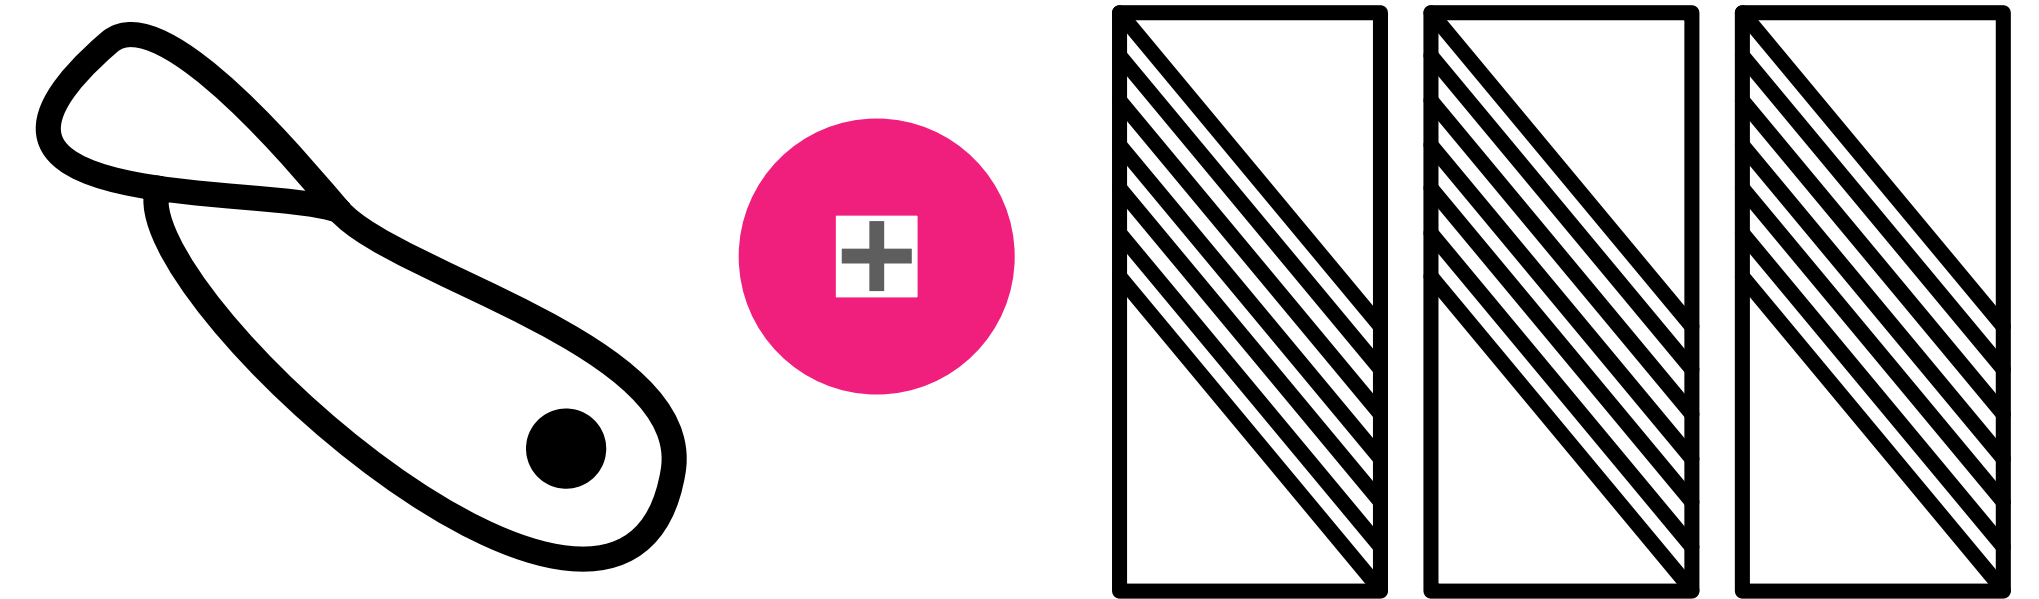

Let's add trust, let's add intrinsic value!

# **How?** A little example…

Artistic statue made of silver

Intrinsic value is a combination of both its aesthetic and material qualities

# Why not follow this concept of <u>intrisic value</u> and apply it to any token, fungible or non-fungible?
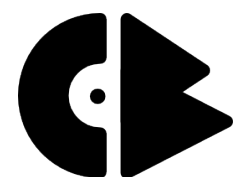

Coinbacked
protocol.
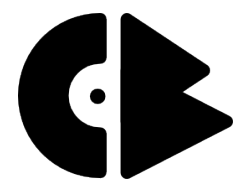

Mint your NFT (or fungible token)

Create **intrinsic value** by backing it with **$SOL!**

Sell, buy, swap! Do whatever!

Burn it and **keep** the intrisic **value**
